

s1_mask_repeats

s2_raw_read_QC

run_all

```
graph TD; A(s1_mask_repeats) --> C(run_all); B(s2_raw_read_QC) --> C;
```

The diagram illustrates a functional dependency. Two input variables, 's1_mask_repeats' and 's2_raw_read_QC', are shown in separate boxes at the top. Arrows from both boxes point downwards to a central box labeled 'run_all', indicating that the 'run_all' function or process takes both inputs as arguments.
